Big questions:

- ◆ What is Cloud?
- ◆ Why Cloud?
- ◆ What if it fails?
- ◆ What about vendor lock-in?
- ◆ How do we secure data?
- ◆ How do we govern Cloud?
- ◆ What are we planning to do on Cloud?

What is Cloud?

Why Cloud?

What if it fails?

Risk Appetite Statement

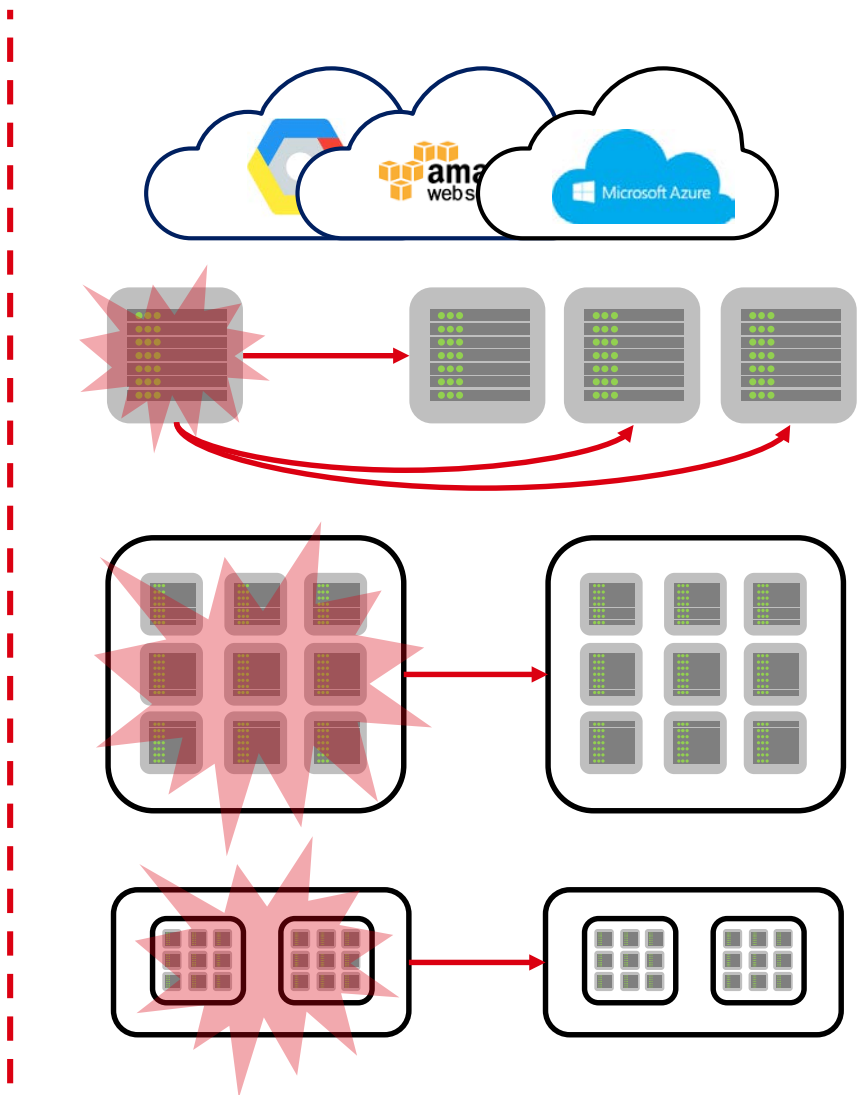

HSBC should ensure that when entering in to, or operating, a material outsourcing agreement with:

- Google Cloud Platform (GCP),
- Amazon Web Services (AWS),
- Microsoft Azure,
- and other Cloud Service Providers

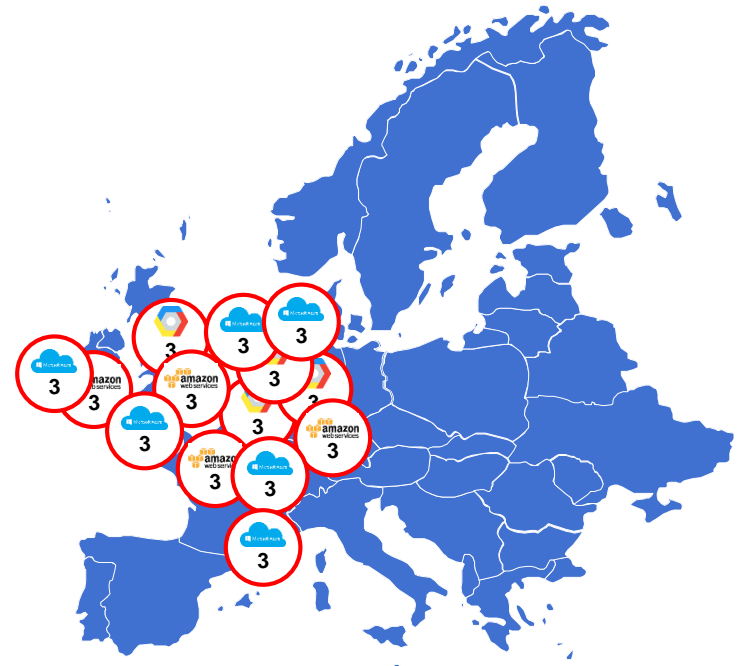

it should not increase the firm's Operational Risk exposure.

This will be managed by ensuring the controls implemented to protect HSBC data are in line with Company Policy and standards

What if it fails?

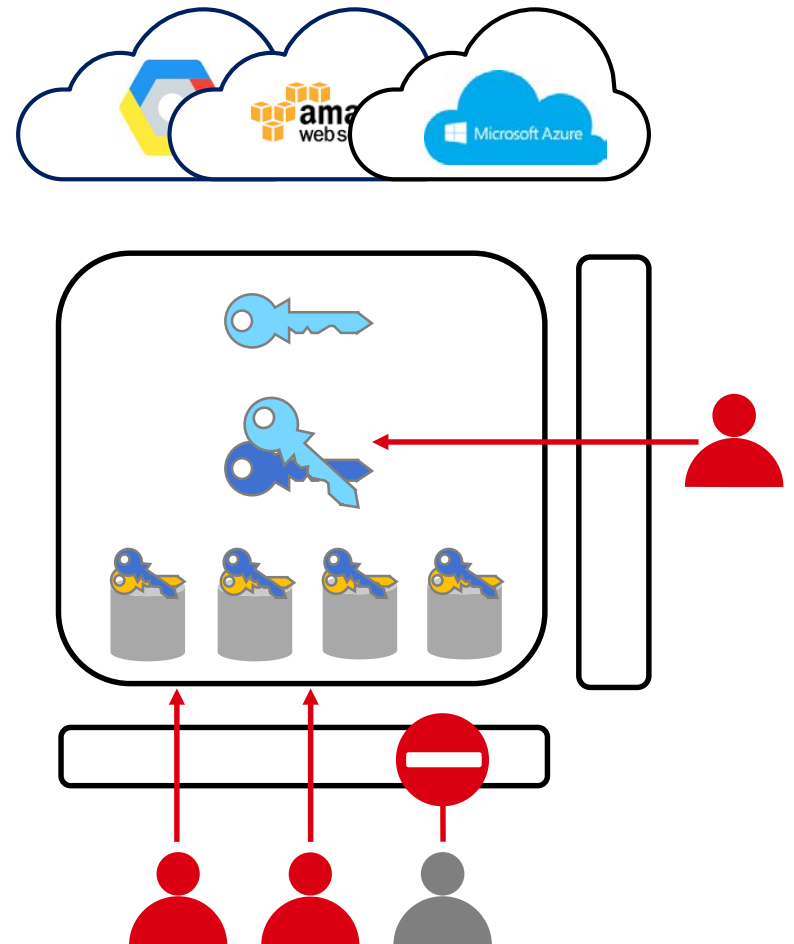

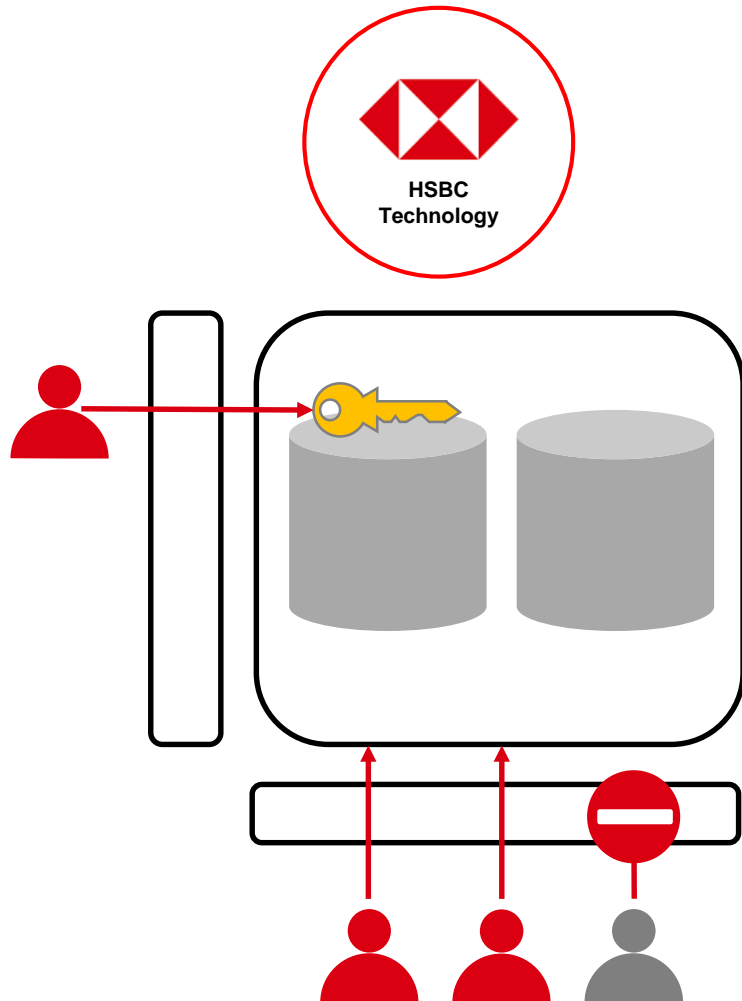

What if it fails?

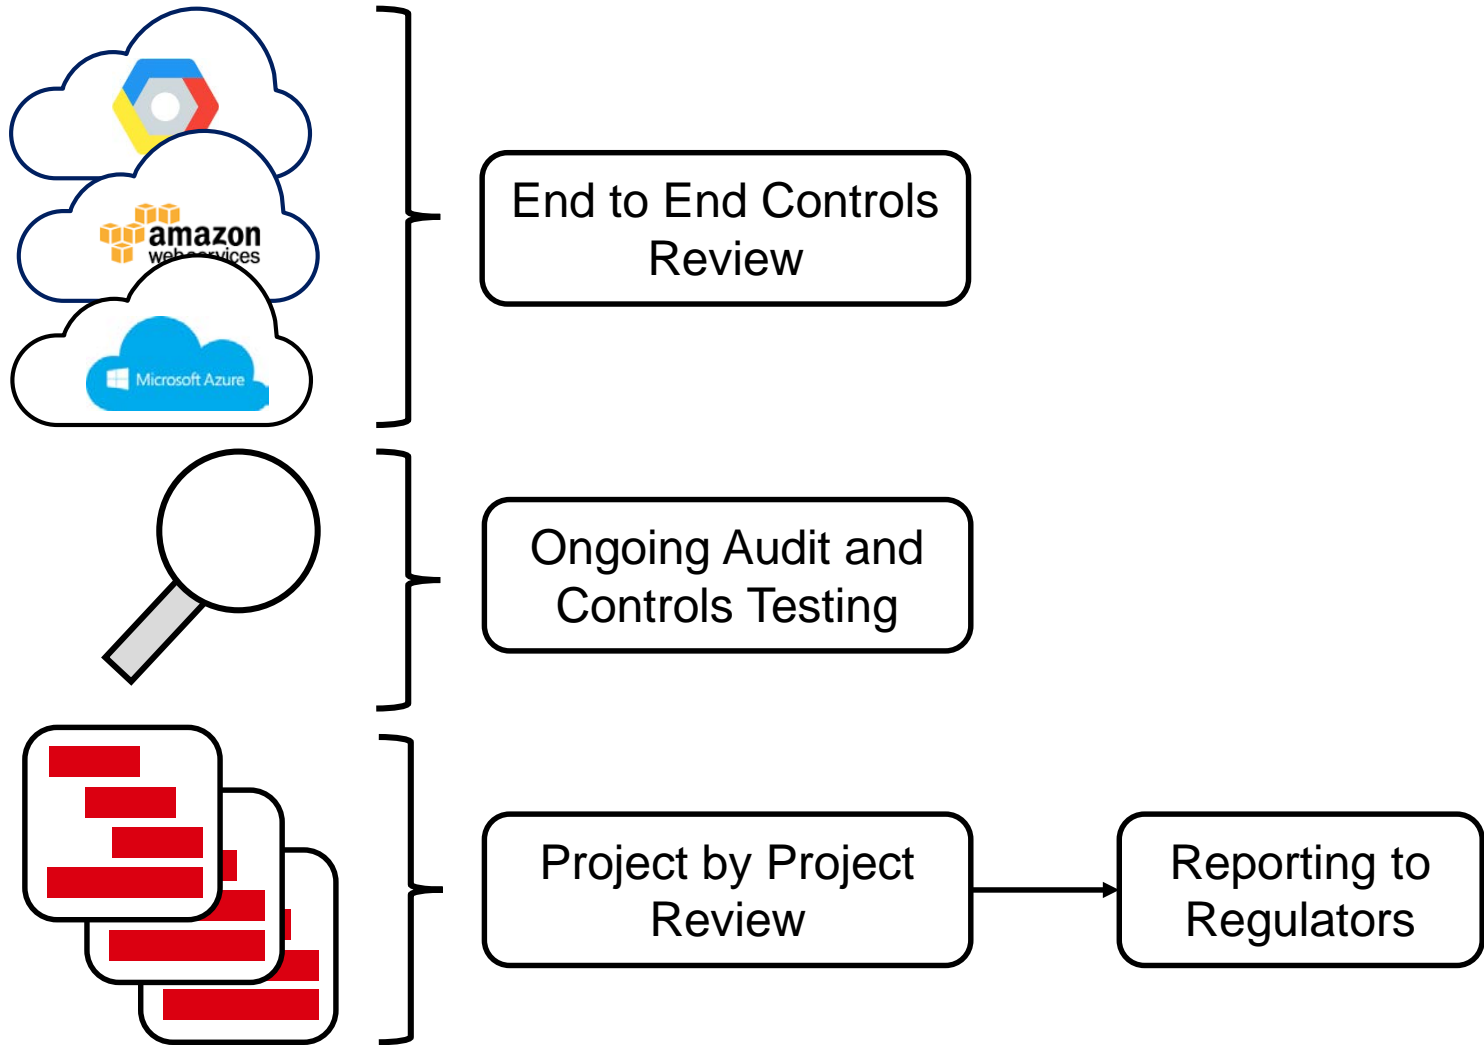

What about vendor lock-in?

How do we secure data?

How do we govern Cloud?

What are we planning to do on Cloud?

1. Migrating Big Data, analytics and Machine Learning to Google.
2. Deploying new Digital applications to multiple Cloud providers.
3. Migrating legacy applications requiring hardware and software refresh.
