(1) Institutions that are subsidiaries of a large institution with the Head Office in another EU/EEA country. They contribute to country aggregates but not to EU/EEA averages. For example, at country level the subsidiary in country $X$ of a largest bank domiciled in country $Y$ is included both in data for countries $X$ and $Y$ for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country $Y$ is considered.
(2) Individual institutions that do not belong to a banking group and report only on individual basis. These institutions are not required to submit $\operatorname{FiNREP}$ data on solo basis to the $E$ EBA and therefore they are no
indicators in this Risk Dashboard.
(3) Institutions that are subsidiaries of an EU large institution. They contribute neither to country aggregates nor to EU/EEA averages because data for these institutions are included in the figures reported at consolidated basis by their parent companies.
(4) Number
aggregates nor to EU/EEA averages because data for these institutions are included in the figures reported at consolidated basis by their parent companies.

## Overview of the main risks and vulnerabilities in the EU banking sector

This section summarises main risks and vulnerabilities for the EU/EEA banking sector. The risk indicators are based on the supervisory data reported by EU institutions, as of Q3 2023. They are complemented by analyses based on market data and other sources as of mid-December 2023. This publication includes an MREL dashboard as well as the results of the autumn 2023 edition of the EBA's risk assessment questionnaire (RAQ).

Slowing growth forecasts, but without major impact on households and corporates so far The European Commission Autumn economic forecast estimates a $0.6 \%$ GDP growth for 2023. While still in positive territory, growth projections have decreased over the year, from $0.8 \%$ in the Summer and $1 \%$ in the Spring Forecast. The EU's slowing growth was mostly driven by weaknesses in consumption and low external demand. The Commission forecasts that 10 Member States will have negative growth for this year. The growth forecast for 2024 decreased as well, by 10 bps compared to the summer forecast, now reaching $1.3 \%$.

Despite this negative trend, the EU labour market appears resilient, with low unemployment rates and high activity indicators. Unemployment in the EU is forecasted at $6 \%$ in 2023, to remain stable in 2024 and to decrease to $5.9 \%$ in 2025 . Moreover, bankruptcies have decreased in the third quarter of the year, after having been on the rise in past quarters. Inflationary pressures continue to ease, with HICP inflation reaching the lowest twoyear point in the Euro area in October at 2.9\%. EU average annual inflation is expected to reach $6.5 \%$ in 2023, with a decreasing trend to $3.5 \%$ in 2024 and $2.4 \%$ in 2025.

## Loan growth remains subdued for most segments

EU/EEA banks' total assets were reported slightly higher than in the previous quarter ( $+0.4 \%$ ), reaching EUR 27.7tn. Tightened lending standards observed across the EU have so far not led to a decrease of outstanding loans to non-financial corporates (NFCs) and households. Both loans towards NFCs and households remained stable at EUR 6.1tn and EUR 6.7tn, respectively. Real estate related exposures, commercial and residential ones, marginally increased over the last quarter. At the same time, RAQ results show a decreasing share of banks planning to increase their lending towards these segments.

Asset quality remains robust, as the deteriorating and uncertain macroeconomic outlook has not yet affected households and corporates. The NPL ratio remained stable at $1.8 \%$ while the stage 2 allocation slightly increased to $9.2 \%$ from $9.1 \%$ in Q2, yet lower than its highest level a year earlier (9.6\%). Cost of risk decreased from $0.45 \%$ in Q2 2023 to $0.44 \%$ in Q3 2023. Some early signs of deterioration are visible, with higher inflows of NPLs over the beginning of 2023, notably in sectors that are sensitive to economic downturns such as real estate exposures.

EU aggregate loans and advances volumes by segment (June $2022=100$ ) (left) and mortgages loans volume variation from June 2022 to September 2023 by country (right)

Source: EBA supervisory data
However, developments in NPL ratios for real estate related sectors were widely dispersed. While NPL ratios of exposures to real estate activities increased year-on-year, the NPL ratio for exposures to the construction sector declined at EU/EEA level. Respective NPL ratios also show strongly differing developments among countries. Looking forward, more banks expect a deterioration of the asset quality, with CRE, SME, and Consumer Credit portfolios to be affected the most, according to RAQ results.

## Active primary funding markets while liquidity ratios slightly decrease

The volume of client deposits, the most important funding instrument, is at a comparable level as in December 2022, after a decline in the first half of 2023 and a slight increase in Q3. The latter was driving the decrease of the loan to deposit ratio to $108.6 \%$ in the third quarter, from $109.3 \%$ in the previous quarter. The liquidity coverage ratio (LCR) slightly decreased from $160.9 \%$ in Q2 2023 to $160.7 \%$ this quarter. The LCR had declined faster in the previous quarter due to the repayment of the ECB's TLTRO III facility by Euro area banks. The net stable funding ratio (NSFR) also decreased to $126.0 \%$ this quarter, from $126.5 \%$ in Q2 2023. The asset encumbrance ratio increased to $25.7 \%$, from $25.4 \%$ in Q2 2023, driven by a stronger increase of encumbered assets and collateral than of total assets and collateral.

Market based funding costs remained broadly stable in the quarter, with differences across banks reflecting their funding mix, after having increased in the previous quarter. Although deposit betas have picked up this quarter, banks more reliant on deposits continued to maintain lower funding costs. In the Euro area, depositors have this quarter moved larger deposit volumes from sight to term deposits than in the previous quarter in order to achieve higher rates for their savings.

Funding activity of primary secured and unsecured instruments has been high, after it had resumed to normal activity in Q2 2023 following the March banking turmoil. As of end of November, banks have issued more instruments across nearly all secured and unsecured debt classes than in the previous two years. Banks' consideration of sustainability aspects is also reflected in their funding, and almost two thirds of banks have already issued green bonds according to the EBA risk assessment questionnaire (RAQ).

New issuances have included subordinated debt eligible for loss absorbing capacity as well as issuances from smaller banks. Data of the MREL Dashboard shows that the MREL shortfall decreased in Q2 and appears marginal at $0.25 \%$ of RWA on EU/EEA level. However, there are still two countries for which the MREL shortfall is between $5 \%$ and $7 \%^{1}$. The data also shows that outstanding MREL debt with residual maturity between one and two years - i.e. debt that needs to be replaced in due course to keep MREL eligibility - as of Q2 is around EUR 55bn (senior non-preferred bonds) and EUR 106bn (senior preferred debt).

Source: Dealogic (left) and Markit IHS (iBoxx, right)²

Capital levels remain robust, slight RWA increase driven by credit risk
EU/EEA banks maintained robust capitalisation levels in the third quarter of 2023. The average CET1 ratio (fully loaded) decreased by 10bps to $15.8 \%$, from a historical high of $15.9 \%$ reported in the previous quarter. The lower end of the CET1 ratio's distribution also decreased by 20bps to $14.7 \%$ in Q3 2023 compared to the previous quarter, while the higher end of the CET1 ratio's distribution was unchanged at 20.3\%. On a year-on-year basis, however, the CET1 ratio increased by 100bps, from 14.8\% in September 2022. The denominator of the CET1 ratio, risk-weighted assets (RWA), increased slightly. The RWA increase was mainly driven by credit risk, reaching $82.6 \%$ of total RWA compared to $82.4 \%$ in the previous quarter, while market risk declined by 10 bps to $3.7 \%$ as of Q3 2023. EU/EEA banks' leverage ratio was at $5.7 \%$ and unchanged compared to the previous quarter.

## Profitability remains high due to interest income

Return on Equity (RoE) stabilised in the third quarter at 10.9\%, from 11\% in Q2 2023. Return on asset stayed at $0.71 \%$ while the cost-to-income ratio decreased from $56.2 \%$ to $55.1 \%$, the historically lowest level reported. Net interest margin continued to grow, albeit at a slower pace as expected, rising by 0.2 bps over this quarter to $1.62 \%$, compared with rise of 5bps from Q1 2023 to Q2 2023. The material rise in profitability has benefited all banks and the quartile dispersion has remained broadly unchanged. The cost to income ratio continued its decline in the third quarter, reaching $55.1 \%$ (down from $56.2 \%$ in the previous quarter) amid rising income and declining costs.

## Operational risk remains highly relevant

Key risk drivers for operational risks include ICT, IT security risks and cyber related risks, but also fraud as well as anti-money laundering and counter financing of terrorism (AML/CFT) circumvention. EBA RAQ results confirm that cyber risk and data security are key drivers of operational risks, and almost two third of banks agree with this view. It is followed by conduct and legal risks, as well as fraud. On ICT and cyber related risks, volume and frequency of cyber-attacks is unabatedly high. Further data breaches, hacker attacks, and ICT related operational shortcomings were recently reported. In the payment sector, incidents causing service unavailability were reported mainly due to system failures, followed by process failures and external events.

On AML related shortcomings, 161 deficiencies, or 'material weaknesses', were reported in 59 institutions for the period from September to November 2023 according to EBA's EuReCA data. ${ }^{3}$ Out of the 59 institutions 21 were credit institutions, which accounted for 55 deficiencies. At the same time 80 'corrective measures' - out of which 33 related to credit institutions - were reported that had been imposed to correct these deficiencies. ${ }^{4}$ Most material weaknesses continue to relate to institutions' customer due diligence (CDD) policies and procedures, and in particular weaknesses in institutions' approaches to customer risk rating.

AML/CFT related material weaknesses and related measures taken (1 September 2023 until 30 November 2023) ${ }^{5}$

Individual country data includes subsidiaries, which are excluded from EU agregate. For example, at country level the subsidiary in country $X$ of a bank domiciled in country $Y$ is included both in data for countries $X$ and $Y$ (for the latter as part of the consolidated entity). In
the EU aggregate, only the consolidated entity domicied in country $Y$ is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

EMBARGOED until 12012024 at 1100 CET

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country $X$ of a bank domiciled in country $Y$ is included both in data for countries $X$ and $Y$ (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually. Being an unbalanced sample, the number of reporting banks per country can display minor variations Other expenses include for instance tazes extraordinary effects impact from discontinued oprations impairment or ( ) reversal of imparment on on financial assets. These expenses are shown with a positive sign like in the columns to the

## Methodological note

## Risk Indicators' (RIs) heatmap

The heatmap provides a quick overview of the main RIs, in which it is possible to find the category, number and designation of the specific RI, its historic development and the three buckets in which each data point is assigned to across time (green for the "best" bucket, yellow for the intermediary one and red for the "worst" bucket). The "sample of reporting banks" returns the actual number of banks that submitted the expected data for that reference date (consolidated view).

For each of the RIs' quarterly data, the distribution across the three buckets is computed in respect of the sum of total assets for all banks that are included in the EBA's reporting sample in each reference date. From reference periods March 2020 onwards, the sum of total asses no longer includes UK banks.. Thus, if we observe any given bucket increasing its percentage, we immediately acknowledge that more assets are being assigned to that bucket. However, this does not necessarily mean that more banks are comprised within the bucket (the sum of total assets for all banks is fixed, as well as the total assets from each bank taken individually).

The traffic light of each RI can assume three colours (green, yellow and red) depending on the latest developments on the "worst" bucket of the RI comparing to the whole time series. If the "worst" bucket is progressing positively (i.e. in case fewer assets are being assigned to it), the traffic light should be moving away from red getting closer to green. The colour is computed considering the 33 rd and the 67th percentile of the time series.

To help reading the heatmap, let us consider the example of the cost to income ratio:

|  | $<50 \%$ |  | $12.6 \%$ | $12.2 \%$ | $12.5 \%$ | $13.7 \%$ | $14.5 \%$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Cost to income ratio | $[50 \%-60 \%]$ |  |  |  |  |  |  |
| $>60 \%$ |  | $25.0 \%$ | $12.0 \%$ | $32.6 \%$ | $34.0 \%$ | $36.3 \%$ |  |
|  |  | $62.5 \%$ | $75.8 \%$ | $54.9 \%$ | $52.3 \%$ | $49.3 \%$ |  |

The green traffic light for the ratio points to the good behaviour of this RI in the last quarter relating to past observations.

More than just declaring if the "worst" bucket has more or less percentage of assets assigned to it, this traffic light approach delivers simultaneously an insight to the latest developments in the RI's "worst" bucket and to the relative position of that data point comparing to all other observations in the same bucket.

The Risk Assessment (RA) meter summarizes the developments in all the KRIs included in the heatmap, providing a single measure. It is computed as the weighted average across the KRIs sum of total assets in the "intermediate" and "worst" bucket. The average is weighted in order to guarantee that each KRI category (solvency, credit risk and asset quality, earnings and balance sheet structure) receives the same weight. Since each category includes a different number of KRIs, the weight of each KRI is thus different. The risk perception increases with higher values of the RA meter: the closer to $100 \%$, the higher the risk.

(3) Appificale only to Frfs reporting banks

[^0]:    ${ }^{1}$ It needs to be noted that some banks have been granted extensions for closing their shortfall beyond 1 January 2024.
    ${ }^{2}$ With regard to IHS Markit in this chart and any further references to it, neither Markit Group Limited ("Markit") nor its Affiliates nor any third-party data provider make(s) any warranty, express or implied, as to the accuracy, completeness or timeliness of the data contained herewith nor as to the results to be obtained by recipients of the data. Neither Markit nor its Affiliates nor any data provider shall in any way be liable to any recipient of the data for any inaccuracies, errors or omissions in the Markit data, regardless of cause, or for any damages (whether direct or indirect) resulting therefrom.

[^1]:    ${ }^{3}$ The EBA's EuReCA is a central database that puts together information submitted by competent authorities on serious deficiencies in individual financial institutions' systems and controls that expose these institutions to money laundering and terrorist financing (ML/TF) risk. EuReCA was launched in January 2022. Data refers to all sectors within the remit of the EBA's AML/CFT mandate, namely: credit institutions, payment institutions, e-money institutions, bureaux de change, investment firms, fund managers, credit providers (other than credit institutions), life insurance undertakings and life insurance intermediaries, and an additional category of 'others'.
    ${ }^{4}$ A material weakness can have one or more measures, and vice-versa.
    ${ }^{5}$ In duly justified and documented circumstances, competent authorities might send a request to the EBA to remove duplicated information previously sent to EuReCA. Due to these data quality checks there might be discrepancies between previous versions.

[^2]:    Data for Cost of Risk are shown here as a positive value, even though they are commonly expenses

[^3]:    Individual country data includes subsidiaries, which are excluded from EU aggregate. For example at country level the subsidiary in country $X$ of a bank domiciled in country $Y$ is iscluded both in data for countries $X$ and $Y$ (for the latter as part of the consolidated entity). In the E E aggregate, only the consolidated entity domiciled in country is considered.
    ually. Being an unbalanced sample, the number of reporting banks per country can display minor variations between quarters, which might accordingly affect quarterly changes in absolute and relative figures. As of Q .12020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of
