Summary*

Capital ratios continued to improve in Q4. This was driven by an increase in capital, which more than offset a slight rise in risk weighted assets. The CET1 ratio reached a new all-time high of 15.5% on a fully loaded basis, up by 40bps quarter-over-quarter (QoQ). Also the lower end of the dispersion recorded an increase. The leverage ratio (on a fully loaded basis) increased to 5.8% from 5.5% in the previous quarter. This was supported by growing capital, but also a decline in total assets. The latter was the result of lower volumes of loans and advances as well as debt securities, whereas cash balances slightly increased. The decline in debt securities was similarly reflected in decreasing sovereign exposures.

The non-performing loan (NPL) ratio decreased by 20bps to 2.6%. The decline was due to a contraction in NPLs, which exceeded the decrease in loans and advances. NPL sales contributed to a large extent to this trend in Q4. NPL ratios declined for both households and non-financial corporates (NFCs). While the NPL ratio declined for most economic sectors it increased materially for accommodation and food services (up from 7.8% to 8.5% QoQ) and arts, entertainment and recreation (up from 6.7% to 7.3%). Amid an only small rise in forborne exposures and despite the decline of the numerator, the forbearance ratio remained unchanged at 2%. The share of stage 2 loans reached 9.1% in Q4, showing a 110bps increase QoQ.

Loans under EBA eligible moratoria nearly halved in Q4. They declined from around EUR 590bn in Q3 to around EUR 320bn in Q4. The decline was more pronounced for NFC exposures than for loans to households. The share of stage 2 loans under moratoria (26.4%) is above that for loans under expired moratoria (20.1%) and nearly three times the ratio for total loans (9.1%). It might indicate that loans still under moratoria might be those with higher risks looking forward, even though it is too early to draw conclusions. On the other hand, the NPL ratio is lower for loans under moratoria (3.3%) than for those under expired moratoria (3.9%). This might be due to the fact that the "past due" criterion kicks in for the latter. Loans under public guarantee schemes (PGS) reached about EUR 340bn, up from around EUR 290bn in Q3. Whereas for PGS loans the share of stage 2 loans (11.7%) was above the overall average of 9.1%, the NPL ratio (1.1%) was less than half of the overall average (2.6%).

Profitability remained strongly subdued. Return on equity (RoE) declined from 2.5% in Q3 to 2% in Q4. The rise in net fee and commission income could not compensate for the decline in net interest income. The latter was due to the contraction in interest bearing assets, amid a flat net interest margin. Cost of risk remained elevated at nearly unchanged 75bps, but with a huge dispersion, indicating that situations seem to be quite different between individual banks. The cost to income ratio rose by 40bps to 65.1% in Q4. Both, staff expenses as a percentage of equity increased slightly from 10.1% in Q3 to 10.3% in Q4, and other administrative expenses from 8% to 8.1%.

The loan to deposit ratio declined from 113.6% in Q3 2020 to 112.2% in Q4, supported by a rise in client deposits from households and NFCs. The asset encumbrance ratio remained unchanged at 27.9%. The liquidity coverage ratio (LCR) reached 173.1% in Q4 (171.2% in Q3).

*)This risk dashboard is based on a sample of Risk Indicators (RI) from 160 European banks (unconsolidated number of banks, including 30 subsidiaries). The sample of banks is reviewed annually by competent authorities and adjusted accordingly. This can determine breaks in the time series. In particular, from Q1 2020 onwards, EU aggregates no longer include figures for UK banks but for subsidiaries of UK banks in EU countries. Ratios provided in the text are weighted average if not otherwise stated.

The data is based on the EBA's implementing technical standards (ITS) on supervisory reporting (EU Regulation No 680/2014 and it subsequent amendments). In the chart on Risk Indicators by size class, considering the distribution of the average total assets, the small banks are those below the first quartile, the large banks are those above the third quartile.

List of Institutions for Supervisory Reporting

Overview of the main risks and vulnerabilities in the EU banking sector

Asset quality

Defaults of NFCs and households still tend to be limited, mostly due to fiscal and other support measures, such as furlough schemes or tax and insolvency law suspensions. However, sectors most affected by the pandemic, such as accommodation and restaurants, or arts, entertainment and recreation, already show signs of asset quality deterioration. The volume of loans under public guarantee schemes (PGS) has continued to increase, while banks' overall loan exposures even slightly declined. This might indicate that growing PGS exposures were rather replacing existing loans. The ECB Bank Lending Survey suggests that the drop in loan growth might be demand driven for NFC exposures. In addition, banks are applying tougher credit standards. While the volume of loans under moratoria has almost halved in the fourth quarter, those loans remaining under moratoria show a higher credit risk (elevated stage 2 and NPI ratios).

Short-term outlook: Until the pandemic is under control, banks will remain vulnerable to adverse credit risk movements. Especially exposures sensitive to those economic activities that are more reliant on social contacts and mobility will remain under pressure. Phase-out of support measures need to be designed in a coordinated manner to prevent potential cliff effects. Reliance on support schemes must not lead to banks impairing their credit assessment standards or delaying debt restructuring. It will be paramount that banks proactively address any deterioration of asset quality. Banks also need to keep on lending to viable businesses.

Markets are sensitive to COVID-19 vaccines rollout and the evolution of the pandemic. Concerns about a decoupling of market valuations and the expected economic performance remain. Spreads are at pre-pandemic lows amidst intense investors' search for yield and abundant market liquidity. The upward trend in yields – starting in the US, but also extending to other economies, including the EU/EEA – has resulted in some bouts of volatility.

Short-term outlook: COVID-19 developments remain as a potential driver for additional volatility. The rise in US Treasury yields observed since January could result in market instability, not least due to potentially sudden drains in market liquidity. Equity markets could suffer abrupt corrections if, e.g., portfolios adjustments occur. Forex markets, in particular emerging countries' currencies, could be under pressure if rising US yields result in sudden outflows. Although debt spreads have been stable so far, an increase in firms' and sovereign funding costs could raise creditworthiness concerns and lead to spread widening.

Amidst increasing deposit volumes and cheap and abundant central bank funding, banks have focused their debt issuance activity on regulatory capital and MREL-eligible instruments, aided by the fact that funding spreads are back to pre-pandemic lows for most debt classes. The recent increase in absolute yields and the steepening of the yield curve might have increased funding costs, yet banks still maintain comfortable funding- and liquidity profiles.

Short-term outlook: Given current abundant liquidity buffers and the availability of central bank funding, banks are not expected to face major funding pressures in the short-term. Nonetheless, the recent increase in absolute yields might further increase the cost of wholesale funding. In the medium-term, the phase out of central bank facilities may prove challenging for some institutions more dependent on them. Banks may also face a decline in clients deposit volumes as non-financial corporations and households reduce their precautionary liquidity buffers or e.g. when tax suspensions will end.

Profitability remains at very low levels, and is a key risk for the long-term sustainability of many banks. Net interest margins remained at comparatively low levels, not least because banks have accumulated large liquidity buffers that offer very little or even negative returns. The strong lending growth observed in the first half of 2020 has faded, adding further pressure to net interest income. The downward trend in operating costs has eased. The cost of risk remained roughly stable at elevated levels during the second half of the year despite uncertainties on the evolution of the pandemic and the economic recovery, as well as the phase out of support measures.

Short-term outlook: Pressure on profitability is expected to remain persistently high. Uncertainty might keep the cost of risk elevated, while strong competition continues to add pressure on net interest margins and fee income. In the short-term, the repricing of wholesale funding might be faster than that of the asset side, hence, adding pressure on margins. Banks will need to streamline their operational structure not least because their clients are increasingly using digital channels. Further investments in new information and communication technology (ICT) and the rationalisation of branch networks might entail substantial costs in the short and medium-term, but are essential to guarantee the long-term viability of institutions.

Operational resilience

Phishing attempts and other types of cyber-attacks are becoming more common. Amid increasingly digital-savvy clients and a substantial share of the payroll working remotely, technology-related disruptions might have a more significant impact. The increase in remote customer on boarding and a rising participation in virtual currency transactions where the identities of the individuals involved is not fully transparent may expose banks to additional ML/TF risks. Growing social awareness of environmental, social or governance (ESG) factors might increase the reputational costs for banks that do not address them adequately. Risks of new types of misconduct and of potentially fraudulent activities related to COVID-19 support measures have not abated.

The level of risk and short-term outlook summarise, in a judgmental fashion, the probability of the materialisation of the risk factors and the likely impact on banks. The assessment takes into consideration the evolution of market and prudential indicators, National Supervisory Authorities' and banks' own assessments as well as analysts' views. The short term outlook refers to a six months period.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of CII 2020 connected U.EA. Base removed from the ULIFEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the lattest version of the Risk Dashboard available in EBA website.

Loans: composition and asset quality

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country Y is onsidered. The sample of banks is unbalanced and reviewed annually.

As of 12 2020 nowards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding 10 2020 Q be printed by the Company of the Company o

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domicided in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of 01 2020 nowards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

(1) Gross carrying amounts, other than trading exposures.

(2) Gross carrying amounts, loans and advances at amortised costs (excluding at fair value through OCI and through P&L, excluding trading exposures).

Non-trading loans and advances to non-financial corporations by sector

The data is based on gross carrying amounts, other than held for trading.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country is considered. The sample of banks is unbalanced and reviewed annually.

As of Q1 2020 onwards UK banks are removed from the UE/EEA aggregate of Uk banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Non-trading loans and advances to non-financial corporations by sector

The data is based on gross carrying amounts, other than held for trading.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country is considered. The sample of banks is unbalanced and reviewed annually.

As of Q1 2020 onwards UK banks are removed from the UE/EEA aggregate of Uk banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Exposures to Real Estate activities and Construction - by country of counterparty

In compliance with the Recommendation ESRB/2016/14 on closing real estate data gaps, the EBA is disclosing aggregated information on the exposures towards Non-financial corporations under Real Estate activities (NACE code L) and Construction Sector (NACE code F) (1) (2)

(1) In disclosing aggregated information on the real estate (RE) exposures towards the different national RE markets in the Union, the EBA made use of information in regulatory reporting templates that provide a breakdown of credit exposures. RE exposures are identified as those referred to as both the NACE codes 'F' and 'L', although strictly speaking some sub-categories would need to be excluded following the Commercial Real Estate (CRE) definition adopted in the ESRB Recommendation.

(2) Data is country aggregated on the basis of the residence of the immediate counterparty. The information on the geographical distribution of exposures by country is reported by institutions where non-domestic original exposures in all 'non-domestic original exposures in all 'non-domestic original exposures shall be deemed to be domestic where they are exposures to counterparties located in the Member State where the institution is located.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of bank is unbalanced and reviewed annually.

As of Q1 2020 onwards UK banks are removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

(1) Applicable only to IFRS reporting banks.
Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of Q1 2020 omnowands to Ranks are removed from the UFEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of 12 1020 omnerates Us hanks are removed from the LUFEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Individual country data includes subsidiaries, which are excluded from EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of Q1 2020 owner AU Unbalance removed from the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

As of Q1 2020 owner AU Unbalance removed from the EU/EEA aggregate and subsidiaries of UK banks in EU member states are used instead.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity, lin the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of bank is unbalanced and reviewed annually.

As of Q1 2020 onwards Uk banks in EU (EEA aggregate and subsidiaries of UK banks in EU (EEA aggregate of UK banks in EU member states are used instead.

Other expenses include for instance taxes, extraordinary effects, impact from discontinued operations, impairment or (·) reversal of impairment on non-financial assets. These expenses are shown with a positive sign (like in the columns to the left). In case there are effects resulting in negative expenses (i.e. a positive income) they have a negative sign.

Figures corresponding to 2020 Q4 period have been revised in the Risk Dashboard of 2021 Q1. For most up-to-date information, it is recommended to use the latest version of the Risk Dashboard available in EBA website.

Individual country data includes subsidiaries, which are excluded from EU aggregate. For example, at country level the subsidiary in country X of a bank domiciled in country Y is included both in data for countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

Compliance table on the Euclidence or Countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

Compliance table on the Euclidence or Countries X and Y (for the latter as part of the consolidated entity). In the EU aggregate, only the consolidated entity domiciled in country Y is considered. The sample of banks is unbalanced and reviewed annually.

Methodological note

Dissemination of EBA's statistics after Brexit

As of 1 February 2020, the United Kingdom is no longer part of the European Union. This has a significant impact on the dissemination of statistics in the EBA's Risk Dashboard. For reference periods February 2020 or later, EU aggregates no longer include figures for UK banks and they include data for subsidiaries of UK banks in EU countries. This means that, due to quarterly frequency of the EBA's Risk Dashboard, the final time period for which the EU28 aggregate is published is December 2019. During the transition period until the end of 2020, the UK is continuing to send data to the EBA. In publications, the EBA will present data for the UK after, and separated from, the Member States.

UK banks included in the EBA's reporting sample and contributing to EU (28) / EEA averages unt Dec 2019	Subsidiaries of UK banks in EU countries contributing to EU / EEA averages from March 2020
Barclays Plc	Barclays Bank Ireland plc

Yorkshire Building Society	

Risk Indicators' (RIs) heatmap

The heatmap provides a quick overview of the main RIs, in which it is possible to find the category, number and designation of the specific RI, its historic development and the three buckets in which each data point is assigned to across time (green for the "best" bucket, yellow for the intermediary one and red for the "worst" bucket). The "sample of reporting banks" returns the actual number of banks that submitted the expected data for that reference date (consolidated view).

For each of the RIs' quarterly data, the distribution across the three buckets is computed in respect of the sum of total assets for all banks that are included in the EBA's reporting sample in each reference date. From reference periods March 2020 onwards, the sum of total asses no longer includes UK banks.. Thus, if we observe any given bucket increasing its percentage, we immediately acknowledge that more assets are being assigned to that bucket. However, this does not necessarily mean that more banks are comprised within the bucket (the sum of total assets for all banks is fixed, as well as the total assets from each bank taken individually).

The traffic light of each RI can assume three colours (green, yellow and red) depending on the latest developments on the "worst" bucket of the RI comparing to the whole time series. If the "worst" bucket is progressing positively (i.e. in case fewer assets are being assigned to it), the traffic light should be moving away from red getting closer to green. The colour is computed considering the 33rd and the 67th percentile of the time series.

To help reading the heatmap, let us consider the example of the cost to income ratio:

	< 50%	12.6%	12.2%	12.5%	13.7%	14.5%
Cost to income ratio	[50% - 60%]	25.0%	12.0%	32.6%	34.0%	36.3%
	> 60%	62.5%	75.8%	54.9%	52.3%	49.3%

The green traffic light for the ratio points to the good behaviour of this RI in the last quarter relating to past observations.

More than just declaring if the "worst" bucket has more or less percentage of assets assigned to it, this traffic light approach delivers simultaneously an insight to the latest developments in the RI's "worst" bucket and to the relative position of that data point comparing to all other observations in the same bucket.

The Risk Assessment (RA) meter summarizes the developments in all the KRIs included in the heatmap, providing a single measure. It is computed as the weighted average across the KRIs sum of total assets in the "intermediate" and "worst" bucket. The average is weighted in order to guarantee that each KRI category (solvency, credit risk and asset quality, earnings and balance sheet structure) receives the same weight. Since each category includes a different number of KRIs, the weight of each KRI is thus different. The risk perception increases with higher values of the RA meter: the closer to 100%, the higher the risk.

⁽¹⁾ The data points refer to the latest version of either FINREP tables ("F") or COREP tables ("C") (http://www.eba.europa.eu/regulation-and-policy/supervisory-reporting/implementing-technical-standard-on-supervisory-reporting). For more information regarding the Risk Indicators formulas, applicable to each reporting framework, please see the List and Methodological Guide available here (http://www.eba.europa.eu/risk-analysis-and-data/risk-indicators-guide).

⁽²⁾ For the calculation of the average the previous December figure is used as an "anchor" for the subsequent year, and the second the number is taken from the latest quarter observation, i.e. Q1, Q2, Q3 or Q4.

(3) Applicable only to IFRS reporting banks. For nGAAP banks the formula is: increases and other adjustments in allowances due to amounts set aside for estimated loan losses during the period + Decreases due to amounts reversed for estimated loan losses during the period] (A) / Total gross loans and advances subject to impairment (B + C + D)

⁽⁴⁾ Encumbered assets (recognised on the balance sheet) are considered at their carrying value, collateral received is considered as at fair value.

⁽¹⁾ The data points refer to the latest version of either FINREP tables ("F") or COREP tables ("C") (http://www.eba.europa.eu/regulation-and-policy/supervisory-reporting/implementing-technical-standard-on-supervisory-reporting). For more information regarding the Risk Indicators formulas, applicable to each reporting framework, please see the List and Methodological Guide available here (http://www.eba.europa.eu/risk-analysis-and-data/risk-indicators-guide).

⁽²⁾ For the calculation of the average the previous December figure is used as an "anchor" for the subsequent year, and the second the number is taken from the latest quarter observation, i.e. Q1, Q2, Q3 or Q4.

⁽³⁾ Applicable only to IFRS reporting banks.

⁽⁴⁾ The formula presented in this document for this risk indicator differs from the formula presented in the EBA list of risk indicators published on the EBA website, which will be subject to future revision.
