

According to EBA Consultation Paper (Consultation Paper on draft ITS on reporting of large exposures, p. 5) institutions should report NACE codes (Statistical Classification of Economic Activities of the EU) in column 060 in LE1 report. Polish banks does not use NACE codes for classifying their clients. It may be time and cost consuming for the Polish banks to assign proper NACE Code to each customer. Therefore we suggest considering to abandon this column as the large exposure reporting is not a statistical reporting, or to substitute NACE codes with the Polish statistical classification (PKD) which is also based on NACE.
